Name _____ Period _____ Due Date _____

Taxonomy of Organisms

By following this worksheet you will understand how organisms are classified and be able to fill how closely they are related.

Step 1: Place the first two names that come to your mind next to each category.

1. **Mammal** - hair, mammary glands (produce milk), endothermic (body temperature maintained within the animal)
 - a. _____
 - b. _____
2. **Bird** - feathers, lay eggs, endothermic
 - a. _____
 - b. _____
3. **Reptile** - scales, lay eggs, ectothermic (body temperature maintained outside of the animal)
 - a. _____
 - b. _____
4. **Fish** - scales, breath with gills, ectothermic
 - a. _____
 - b. _____
5. **Amphibian** - larvae has gills, adult has lungs
 - a. _____
 - b. _____
6. **Insect**, **Arachnid**, **Crustacean** - exoskeleton, multiple legs
 - a. _____
 - b. _____
7. **Angiosperm** (Flowering plants)
 - a. _____
 - b. _____
8. **Angiosperm** (Flowering Trees - fruit trees)
 - a. _____
 - b. _____
9. **Gymnosperm** (Trees with cones)
 - a. _____
 - b. _____
10. **Bacteria**
 - a. _____
 - b. _____
11. **Protista**
 - a. _____
 - b. _____
12. **Fungi**
 - a. _____
 - b. _____

11.) These organisms are very different, and yet they are all classified in the same kingdom. Identify two characteristics that allow them to be classified together, and identify the kingdom to which they all belong. (1.5 points)

12) Explain how can fungi be useful to the environment? (0.5 point)

What are the five kingdoms?

Monera kingdom	Protocist Kingdom	Fungi Kingdom
<p>Contains unicellular, prokaryotic organisms. They may be autotrophic or heterotrophic. Bacteria and cyanobacteria</p>	<p>Contains unicellular and multicellular living things. They are all eukaryotes. They have no tissues. They may be autotrophic or heterotrophic. Protozoa, algae.</p>	<p>Contains unicellular and multicellular living things. They are eukaryotes. They have no tissues. They are heterotrophic. Yeasts, moulds, mushrooms</p>
Plant Kingdom	Animal Kingdom	
<p>Contains multicellular eukaryotes. They have tissues. They are autotrophic. Mosses, ferns, conifers, flowering plants.</p>	<p>Contains multicellular eukaryotes. They have tissues. They are heterotrophic. Animals: may be invertebrate or vertebrate.</p>	

Task 2:
Complete the table to describe the five kingdoms:

Kingdom	Type of cells	Tissues	Autotrophic / Heterotrophic
Moneran			
Protocist			
Fungi			
Plant			
Animal			

glossary: unicellular, multicellular, have tissues, have no tissues, autotrophic, heterotrophic

What should you know?
Living things can be differentiated by the way they feed, reproduce, interact with their environment, etc. They are classified into different groups. The main group is the kingdom. Each kingdom is then divided into subgroups.

Classification of Organisms

Classification of Organisms Vocabulary

Match the Vocabulary Word on the left to the Definition on the right.

Taxonomy	The arrangement of parts that form a living thing.
Structure	An organism that obtains its nutrition from simple, inorganic compounds.
Unicellular Organism	What something does.
Multicellular Organism	The branch of science that formally names and classifies organisms by their structure, function, and relationships.
Function	Unable to make its own food from simple inorganic molecules.
Autotrophic	An organism made up of one cell.
Heterotrophic Organism	An organism made up of more than one cell, and often made up of different types of cells.

Classification

Classification Riddles

1. You have learned that living things are classified into groups based on genetic similarity. Try to solve the following riddles about real organisms that aren't so easy to classify.

a. I have a head like a foot, Add my arms on the sides, I have three legs that I use, But I walk on water. What am I?

b. I have a bill like a duck, But the base of my beak is like an egg like a bird, But I make my young. What am I?

c. I have a tail like a fish, But I don't like the sea, I do not eat any animals, But I do eat the sea, I make small fish, And I make small fish. Try to guess my kingdom. What am I?

1 of 1

Hepatitis B usually causes short-term discomfort that many people recover from completely after about four to eight weeks. Hepatitis B can be transmitted through sexual activity and exposure to infected blood. This can then lead to complete liver failure and the need for a transplant to stay alive. Foods that contain high concentrations of vitamin C have been linked with a lower risk of cardiovascular disease, like heart attack and stroke. It is curable. Vitamin C can also increase levels of nitric oxide, a compound that widens blood vessels and, in turn, lowers blood pressure. Here are some situations that put you at an increased risk of getting the disease as cited by the Mayo Clinic. Practice safe sex — use a condom. Photo Courtesy: The Good Brigade/DigitalVision/Getty Images Hepatitis is a condition that causes inflammation of your liver. It also acts as a potent antioxidant and can repair damage from free radicals, which are linked to aging effects, and disease vulnerability. Hepatitis C can spread through unprotected sexual intercourse, but this is a less common way to transmit it. While there's no vaccine for chronic hepatitis C, treatments that are available today offer a 95% cure rate. Chronic hepatitis C can significantly affect how your liver works. Preventing Hepatitis C The best and easiest way to prevent getting hepatitis C is to ensure you are making good decisions. You and your doctor will have to work together to figure out which antiviral medications are going to work in your particular situation. If you were to have symptoms of hepatitis C, what would they look like? Hepatitis C occurs more commonly in people who engage in intravenous drug use. This form of hepatitis causes a chronic illness in over 50% of people who get this type of the virus. However, it can turn into a chronic condition that lasts for years; this is more likely in older adults. Though research does not indicate that vitamin C intake alone can prevent the onset of cold or flu, adequate daily intake may shorten the duration of an infection or lessen the severity of symptoms. MORE FROM SYMPTOMFIND.COM In addition, regular intake of vitamin C, along with other vitamins, has been linked to a decreased risk for developing age-related cataracts, a leading cause of visual impairment in the United States. Common Sources of Vitamin C Vitamin C can be easily obtained through the many different foods, including: Photo Courtesy: Akaradech Pramoooin/Moment/Getty Images Citrus fruits and juices (orange, grapefruit, lemon, lime and tangerine) Berries Melons Mangoes Kiwi Tomato Broccoli Red peppers Spinach Squash Potatoes Cooking these foods may result in the loss of some of the vitamin content, so it is ideal to ingest them raw, either whole or juiced. While doctors can't treat hepatitis A with medication, people who get this virus can manage its symptoms with fluids, rest and good nutrition. These include if you have HIV, inject or inhale drugs, are a health care worker who may be exposed to contaminated blood, have been in prison, received a tattoo or piercing from a questionable environment or were born to a woman with hepatitis C. If you use illicit drugs, which you should seek treatment for a litany of reasons, never share needles with other users. There's a safe vaccine available to protect you against hepatitis B, too. What Is Hepatitis C? Photo Courtesy: BSIP/Getty Images Approximately 4 million people in the United States are affected with hepatitis C. Currently, there are an estimated 6 million people living with hepatitis in the United States, and more than 50,000 people are diagnosed with this disease every year. Therefore, if the main source of vitamin C is from naturally occurring foods, it is near-impossible for excess vitamin C to produce side effects. Additionally, vitamin C can also prevent anemia, since it helps the body increase absorption of dietary iron, another vital mineral that the body cannot spontaneously create. Making lifestyle changes, such as reducing or eliminating alcohol from your diet, can also decrease your chances of experiencing complications. Resource Links: MORE FROM SYMPTOMFIND.COM Hepatitis C, a virus that attacks the liver, is a tricky disease. Most medications can remove all traces of the virus in your blood in about 12 weeks. Daily Dosage Recommendations: The daily dosage recommendation for vitamin C is different for everyone, depending on factors such as gender, age, lifestyle and current health condition. What Are the Symptoms of Hepatitis C? Photo Courtesy: Catherine Falls Commercial/Moment/Getty Images Vitamin C is crucial for the maintenance of well being. Also known as ascorbic acid, vitamin C is critical to living healthily. Complications From Hepatitis C Hepatitis C can lead to liver cancer. Since people who are pregnant, breast feeding, smoking or using oral contraceptives have a lower blood level of vitamin C than others, larger doses of vitamin C may be needed to achieve optimal results in these individuals. Although there are five types of viral hepatitis, only A, B and C are the forms commonly found in the United States. Resource Links: "Hepatitis A, B, and C: Learn the Differences," Immunization Action Coalition "What's the Difference Between Hepatitis A, B and C?," UNC Health Talk "The ABCs of Hepatitis," Centers for Disease Control and Prevention "What's the Difference: Hepatitis B vs Hepatitis C?," Hepatitis B Foundation MORE FROM SYMPTOMFIND.COM Photo Courtesy: Flashpop/DigitalVision/Getty Images Whether in the form of a fizzy drink or flavored lozenges, cold and flu preventative supplements almost always highlight vitamin C as one of their key ingredients. However, taking excessive concentrated vitamin C supplements may lead to diarrhea or stomach upset. Also, those born between the years of 1945 and 1965 have cause for concern as they are five times more likely to be infected with hepatitis C than people born outside of this time frame. So, what's so magical about vitamin C? It can also cause cirrhosis of the liver, which creates mass scarring and makes it difficult for the liver to work as it should. Chronic hepatitis often has few symptoms in its early stages, so recognizing the associated dangers and getting tested if you've been exposed may save your life. However, malnourished individuals can experience symptoms of vitamin C deficiency over time, including: Weakness Fatigue Anemia Easy bruising Joint pain Skin breakdown Weakened tooth enamel Gum inflammation Severe vitamin C deficiency is referred to as scurvy. It's the least transmissible of the three viruses and can spread through contact with infected blood. Individuals with insufficient vitamin C may find that it takes longer than usual to recover from a cold or a physical wound. Those who have prior or current medical conditions may also require bigger or smaller dosage levels, as recommended by their healthcare providers. In severe cases, hepatitis C may require a liver transplant. Some people have it and may never know it as they are affected by any sorts of symptoms. It can also be passed from a parent to their newborn child during birth. There's also a safe and effective vaccine available to protect you against hepatitis A. What Is Hepatitis B? Hepatitis B can occur both acutely (meaning it develops quickly and lasts a short time) and chronically (meaning it develops slowly over time and worsens over months or years). Since vitamin C is crucial in the detoxification of the body, a lack of vitamin C can compromise the immune system and make an individual more susceptible to diseases and infections. Who Is at Risk to Get Hepatitis C? It can cause cirrhosis, which means that your normal liver tissue is replaced with scar tissue. Hepatitis C Treatment Hepatitis C is the leading cause of liver cancer and liver transplants, according to WebMD. Since the human body cannot spontaneously generate this nutrient, vitamin C must instead be absorbed from outside sources, such as vitamin supplements or foods that are naturally rich in it. What Does Vitamin C Do? Commonly found in cold and flu preventative supplements, vitamin C strengthens and speeds up immune system functionality. Learning more about each type of hepatitis can help you better understand the condition as a whole. What Is Hepatitis A? Hepatitis A is the most easily transmitted of the three viruses. There are different strands of hepatitis C and, thus, no one pill can treat them all. However, in most cases, treatments focus on proper hydration and nutrition. This virus is more common in places with underdeveloped sanitation systems. The varying forms of viral hepatitis affect millions of people in the United States. If you have symptoms at all, here are some to look out for, as listed by the Mayo Clinic. These include bruising easily, fatigue, bleeding easily, itchy skin, jaundice or yellowing of the skin, dark-colored urine, confusion and swelling in your legs. Nowadays, there are also numerous packaged food products, like cereals, that have been enriched and fortified with vitamin C, so that the nutrient can be easily obtained. If you received a blood transfusion before 1992, you should also get tested for hepatitis C if you haven't previously. However, there are medications that can help keep this disease in check. Hepatitis C is a virus transmitted through the blood from one person to another. However, it can cause serious illness in some people. While it is a good source when an individual is in need of a vitamin C boost, supplements are not meant to replace a diet rich in naturally derived vitamin C. What Happens When You Have Too Much — or Too Little — Vitamin C? Vitamin C is a water-soluble vitamin that can be easily flushed out of the body via urination when it is not needed. It can also cause liver cancer. Acute hepatitis C is the phase when you are first exposed to the disease. However, there is no easy fix that works for each person. Hepatitis A causes a short-term, acute sickness that most people heal from without treatment. Doctors can treat severe chronic hepatitis B with antiviral medications. It can remain silent until there is severe damage to your liver. Vitamin C may also be labeled as "L-ascorbic acid" in supplement form, and most over-the-counter multivitamins contain the recommended daily amount of the vitamin. For example, it plays a role in wound healing and helps maintain many essential body tissues. Scurvy can be easily treated with increased dietary or supplemental vitamin C. Symptoms usually show up between two and 12 weeks after being exposed to the virus and last two weeks to three months, according to the Mayo Clinic. The recommended daily dosage for vitamin C is at least 75 mg daily for women and 90 mg for men. It affects approximately 2,500 people every year in the United States. There are three primary types of hepatitis, and while their symptoms can be similar, they vary largely in the ways they're transmitted. Make sure to check the hygienic conditions of a place before you decide to get piercings or a tattoo. Photo Courtesy: Violeta Stoimenova/E+/Getty Images Since vitamin C-rich foods are so readily available nowadays, symptoms of inadequate vitamin C intake are also rare in the United States. According to the Centers for Disease Control and Prevention, up to 2 million people in the United States are chronically affected with hepatitis B. It typically spreads through feces-contaminated food or water and is found in the feces of people who have the virus.

13/12/2021 · C = Commit to the Emotional Forgiveness That Was Experienced H = Hold on to Forgiveness When Doubts Arise (Worthington, 2006). In-session Worksheets: REACH forgiveness; Follow the reach model in your written narrative of forgiveness; R = Recall the Hurt. Close your eyes and recall the transgression and the person involved. Aromaticity Rules. Aromatic compounds are less stable compounds, and they have many kinds of chemical as well as synthetic uses. In fact, the nucleic acids and the amino acids that make up our cell structure make use of these aromatic compounds. But, the main thing is what makes aromatic compounds. But, the main thing is what makes aromatic compounds? 01/11/2021 · Archimedes' principle states that a body submerged in a fluid is acted upon by an upward force equal to the weight of the fluid displaced. Learn... All living things breathe, eat, grow, move, reproduce and have senses. Non-living things do not eat, grow, breathe, move and reproduce. They do not have senses. Living things have "life," though some might not show its evident signs. For instance, a tree would probably not react the same way a human would. The Multiplication Tables Check (MTC) is a key stage 2 assessment to be taken by pupils at the end of year 4 (in June). The purpose of the MTC is to make sure the times tables knowledge is at the expected level. In the 2021/2022 academic year, the multiplication tables check (MTC) is statutory for primary schools.
